

Computer Science – Python Programming

11 January 2026 20:43

Time: 70 Minutes

Maximum Marks: 70

Instructions:

1. All questions are compulsory.
2. Read the questions carefully.
3. Assume suitable values wherever required.
4. Use proper indentation while writing programs.

Section A – Fill in the Blanks

(10 × 1 = 10 Marks)

1. The keyword used to define a function in Python is _____.
2. The operator used for floor division is _____.
3. A list is created using _____ brackets.
4. The function used to get input from the user is _____.
5. The statement used to handle exceptions is _____ block.
6. The data type of (10, 20, 30) is _____.
7. The operator ** is used for _____ operation.
8. In Python, dictionary stores data in _____ pairs.
9. The keyword used to exit a loop is _____.

10. len() function is used to find the _____ of a sequence.

Section B - Multiple Choice Questions (MCQ)

(10 × 1 = 10 Marks)

1. Which of the following is a valid variable name?
 - a) 2num
 - b) num_2
 - c) num-2
 - d) @num
2. Which loop is used when the number of iterations is known?
 - a) while
 - b) do-while
 - c) for
 - d) switch
3. Which function converts a string to integer?
 - a) float()
 - b) str()
 - c) int()
 - d) bool()
4. What will type([10,20]) return?
 - a) tuple
 - b) list
 - c) dict
 - d) set
5. Which operator is used for logical OR?
 - a) &&
 - b) ||
 - c) or
 - d) |
6. What does pop() do?

- a) Adds element
 - b) Removes element
 - c) Sorts list
 - d) Clears list
7. Which symbol is used for comments?
- a) //
 - b)
 - c) #
 - d) **
8. Which keyword is used to handle exceptions?
- a) error
 - b) handle
 - c) try
 - d) catch
9. What will `len("Python")` return?
- a) 5
 - b) 6
 - c) 7
 - d) Error
10. Which data structure stores key-value pairs?
- a) List
 - b) Tuple
 - c) Dictionary
 - d) Set

Section C - Long Programming Questions

(6 × 5 = 30 Marks)

Attempt ALL questions

1. List Based

Write a Python program to create a list of 5 numbers and:

- Display the list

- Find the largest number
- Display the sum of elements

2. Dictionary Based

Write a program to create a dictionary of 5 students with marks.

Display:

- All students
- Student with highest marks

3. Tuple Based

Write a Python program to:

- Create a tuple of 6 elements
- Display only even numbers from the tuple

4. String Based

Write a program to accept a string and:

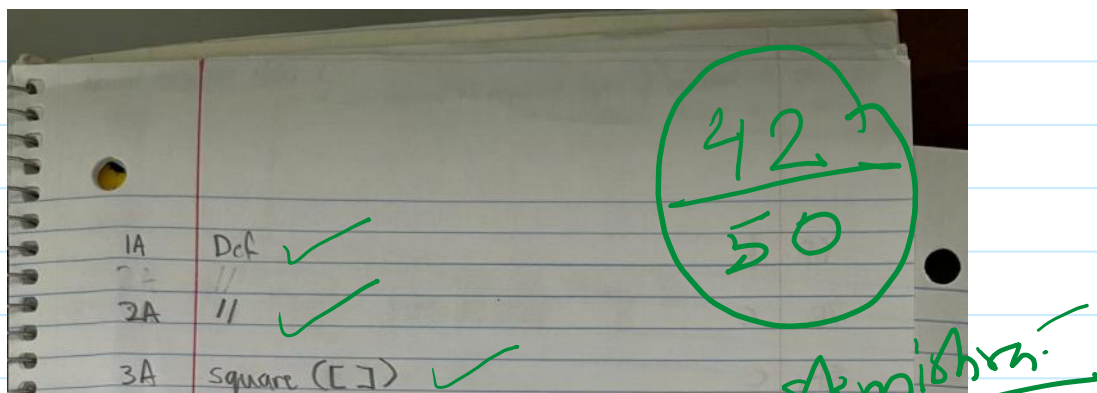

- Count vowels
- Reverse the string

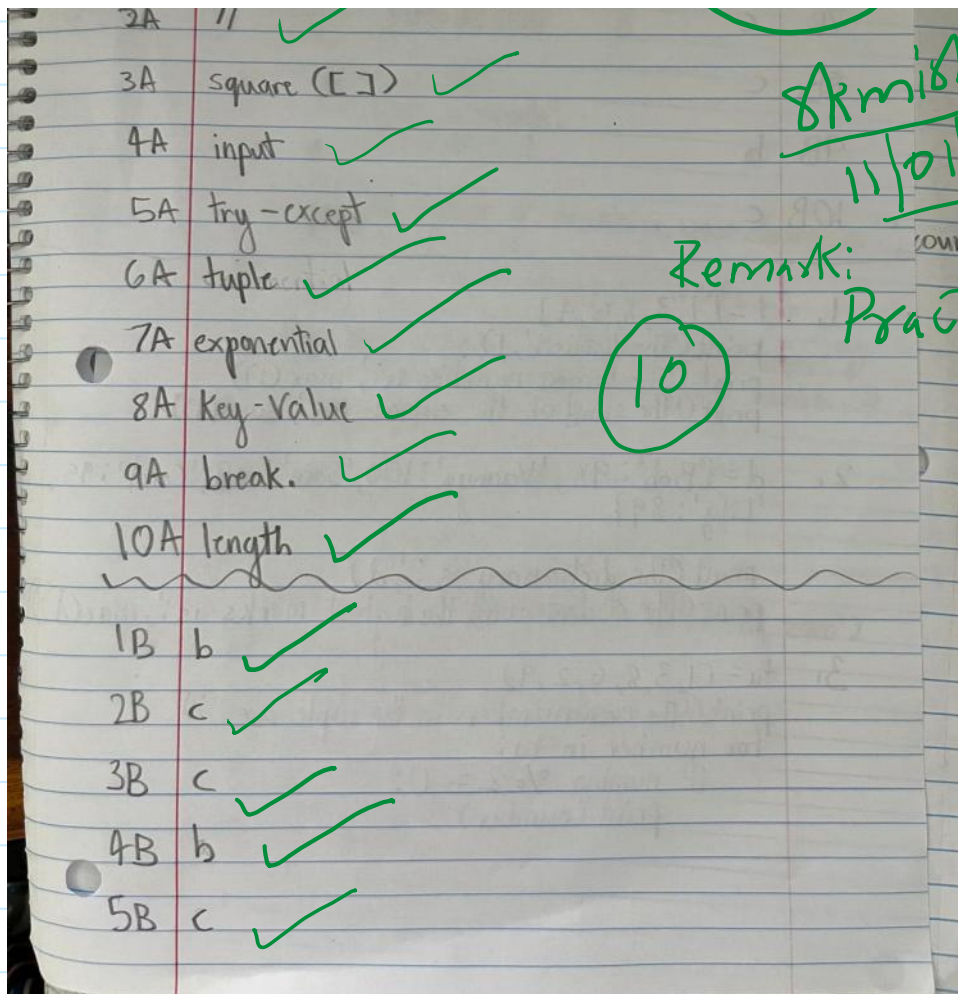

5. Exception Handling

Write a program to divide two numbers using try and except block to handle division by zero error.

6. User Defined Function

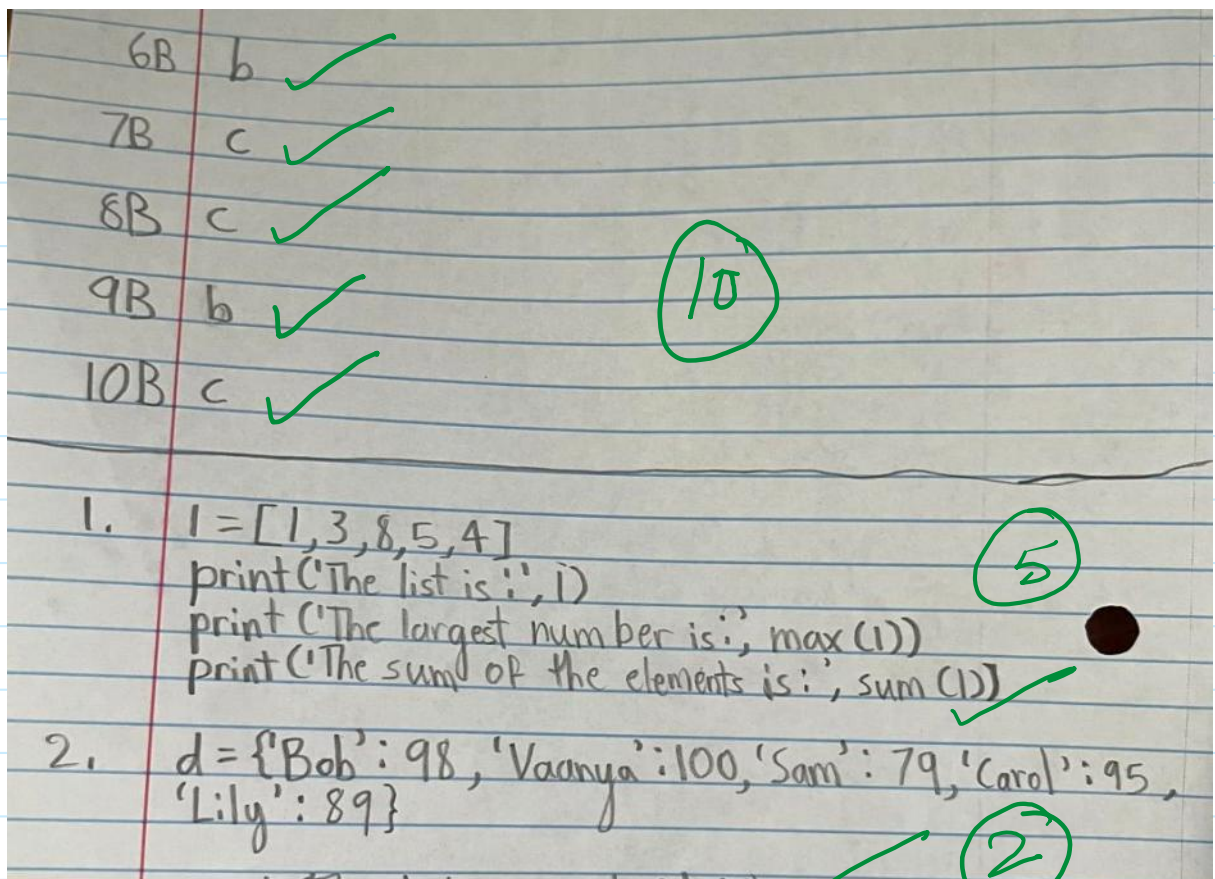

Write a function factorial(n) to calculate factorial of a number. Call the function and display the result.

8kmishrn.
11/01/26

Remark:
Practice more coding.

```

'Lily': 89}
print('The dictionary is:', d)
print('The student with the highest marks is:', max(d))
3. tu = (1, 3, 8, 6, 2, 9)
   print('The even numbers in the tuple are:')
   for number in tu:
       if number % 2 == 0:
           print(number)

```

2

5

```

4. str1 = input('Enter the string:')
   vowels = 'aeiouAEIOU'
   count = 0
   for char in str1:
       if char in vowels:
           count += 1
   print('The number of vowels in your string is:', count)
   revstr = str1[::-1]
   print('The reversed string is:', revstr)
5. num1 = float(input('Enter the first number:'))
   num2 = float(input('Enter the second number:'))
   try:
       ans = num1 / num2
       print('The answer is', ans)
   except ValueError:
       print("You must enter numbers")
   except ZeroDivisionError:
       print('You cannot divide or divide by zero')
6. def Factorial(num):
   num = int(input('Enter your number:'))
   res = 1
   for i in range(1, num+1):
       res *= i

```

5

3

2

~~> num = int(input("Enter any number: "))~~
→ res = 1
→ for i in range(1, n+1):
 res = res * i
return result ✓

②

main code

n = int(input("Enter any number: "))

f = factorial(n)

print("Factorial of", n, "=", f)
